

# Selecting the Proper AK11 Bracket

There are two different button configurations on the AK breakers that can be operated by the AK11. It is important to purchase and install the proper mounting bracket in order for the AK11 actuator to align properly with the buttons. The difference between the breakers is in the location of the CLOSE button in relation to the rectangular opening surrounding the button. See the pictures below for clarification.

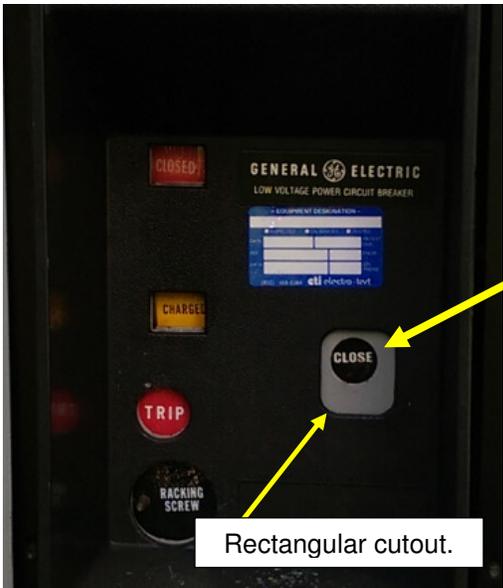

This breaker requires the P-0235 Mount

Notice how the CLOSE button is located "LOW" within the rectangular cut out.

P-0235 mount can be identified by straight cut edge on the ends

This breaker requires the P-0243 Mount

Notice how the CLOSE button is located "HIGH" within the rectangular cut out.

P-0243 mount can be identified by notches on the ends
